

**PROBLEMS FACED BY GRADE ELEVEN STUDENTS IN REMOTE
SCHOOLS IN LEARNING MATHEMATICS -THIRUKKOVIL
EDUCATIONAL ZONE**

Mathematics plays an important role in each and every person's life because it is related to each and every activity of our life. So, it is vital for a child to learn it from his school time. It is important for a child to pass mathematics subject under Sri Lanka's education system.

Most of the G.C.E (O/L) students studying at remote schools in Sri Lanka fail in mathematics subject, and as a result they are unable to continue their education. In this study, we attempted to identify the real causes for this situation.

In this Survey, I have identified six remote schools out of the twelve such schools in the Thirukkivil Education Zone; collected data from the said schools' teachers, students, principals, and parents; evaluated such data and put forward some conclusion and suggestions to improve learning of mathematics.

I strongly believe that this Survey will, to a great extent, benefit students' learning of mathematics in remote schools in the Island.
